

Spotlight on LEARNING

eLearning

Redwood School

What is

eLEARNING?

eLearning is the careful and strategic use of Digital Technologies resources to support and enhance learning, either through delivering content or students creating new content using these technologies. eLearning is about creating new learning experiences and opportunities by utilising digital technology that would be unavailable using more traditional tools.

Why it's

IMPORTANT?

Digital Technology is a powerful learning tool. It has transformed the way we live and has the ability to enrich and enable learning if used in the right way. eLearning provides access to a variety of resources, can facilitate creativity, and enables students to become digitally literate. Students also have opportunities to communicate and collaborate beyond their classroom mirroring the connectivity we have beyond school.

Redwood School Definition of eLearning

“eLearning at Redwood School is teaching and learning that is facilitated by, or supported through, the appropriate use of Digital Technologies. Best practice eLearning enables accessible, relevant and high-quality learning opportunities that improve the achievement of ākonga.”
